

Top Products of 2007 **Fastener** TECHNOLOGY INTERNATIONAL

A winner in our eleventh annual article on the top products of the year. Results were based on selection by the Fastener Technology International Editorial Staff.

Fastener Packaging System

The Short-Run Packaging System offered by **Delta Engineering Corporation**, Winchester, MA, USA, is designed for the packaging of fasteners, electrical connectors and other discretely shaped items into boxes, bags and clamshells. The system is designed as a replacement for the traditional bench scale by taking most of the material handling out of the process with the use of a vibratory feeder system. Bulk product is loaded into the bowl and fed directly into the container, which is held in place by a funneling fixture allowing the operator to close and label the previous package while the next package is being filled. www.deltaengineeringcorp.com
